

What is definition of Done?

Definition of Done

- All conditions, or acceptance criteria, that a software product must satisfy are met and ready to be accepted by a user, customer, team, or consuming system.
- Definition of done is used to ensure quality.
- It lowers rework, by preventing user stories that don't meet the definition from being promoted to higher level environments.
- Prevents features that don't meet the definition from being delivered to the customer or user.
